Catch Issues Before They Impact Your Business

From the user to the application, Catchpoint delivers insights across the Internet Stack to anticipate, detect, and fix problems fast

Having the best apps, websites, and SaaS applications doesn't matter if your users can't reach them. Achieving an optimal user experience is no easy feat when the entire Internet is your network, and the Internet itself is daily growing in complexity and fragility. One issue in the Internet Stack can quickly snowball into a larger problem, damaging revenue and reputation.

Catchpoint is the Internet Resilience Company™. The world's most innovative digital companies rely on Catchpoint's unparalleled Internet Performance Monitoring (IPM) Platform to catch any issues in the Internet Stack before they impact their business. Our SaaS Platform, built by the experts for the experts, offers five enterprise IPM solutions to ensure Internet Resilience across your organization so that you can consistently offer great experiences for your customers and employees.

Discover the power of Internet Performance Monitoring (IPM)

Catchpoint, a Gartner® Digital Experience Monitoring Magic Quadrant™ leader, delivers five IPM solutions for complete operational visibility into all aspects of your business on a single SaaS IPM Platform.

Customer Experience

When your customer's digital experience suffers, even if you have little control over the reasons, your business suffers. We anticipate, measure and pinpoint issues that negatively impact customer experience.

Network Experience

When users can't reach content due to the Internet, LAN, or your internal network, the network team is the first to be blamed. We identify root cause, helping determine ownership and accelerate MTTR.

Application Experience

When customers can't connect to applications that fuel your business, it hurts your bottom line. Gain the actionable insights you need to detect and troubleshoot application performance issues before they hurt your business.

Website Experience

When your website performs poorly, your business suffers financially and reputationally. We help you deliver fast, snappy websites, convert more users, perform better on Google, and stay ahead of the competition.

Workforce Experience

When your workforce can't connect, it hurts your bottom line and impacts employee morale and productivity. Detect and troubleshoot SaaS, network and connectivity issues before they impact your workforce.

Visibility Matters

Complete Internet Stack visibility is powered by over 50 synthetic monitoring test types, real user monitoring, tracing, BGP, and endpoint telemetry. Catchpoint IPM assures your digital experiences across websites, applications, APIs, internal and external networks, customers, and workforce.

AI-powered

We believe AI should make your jobs easier, which is why our Internet Sonar and Internet Stack Map capabilities leverage AI to correlate billions of results to give you answers without having to ask.

Leverage Unparalleled Global Visibility

Catchpoint's unrivaled global agent network delivers end-to-end actionable insights from your user's perspective. We collect and analyze the most complete digital experience monitoring data set in the industry. Today's complex API-driven economy requires continuous optimization and IPM that allows you to proactively remediate issues.

Public agents

Observe reachability, availability, reliability, and performance from critical Internet locations, across top-tier backbone, last mile, wireless, cloud, and multi-access edge computing providers.

Enterprise agents

Gain proactive visibility into business- critical systems and applications anywhere within your enterprise using private cloud agents. Choose from physical or virtual appliances with Linux OS.

Endpoints

Actively and passively observe digital workforce experience, network, and application performance directly from your employees' devices, wherever and whenever they're working.

Our global network doesn't go down when your cloud providers do

Catchpoint's global agent network is decoupled from the hosting cloud providers, ensuring the unprecedented ability to continue to proactively detect, identify, fix and validate issues even when those clouds go into incident.

“

We get Catchpoint alerts within seconds when a site is down. And we can, within three minutes, identify exactly where the issue is coming from and inform our customers and work with them.”

Martin Norato Auer

Vice President of Observability, SAP Customer Experience

In today's exacting digital age, performance is paramount. The top online retailers, Global2000, CDNs, cloud service providers, and xSPs all rely on Catchpoint to ensure high performance and digital resilience by catching issues across the Internet Stack before they impact their customers, workforce or digital experiences. Catchpoint's Internet Performance Monitoring (IPM) suite offers Internet Synthetics, RUM, BGP, Tracing, performance optimization, high fidelity data and flexible visualizations with advanced analytics derived from the world's largest, most detailed, active agent network. Today's digital world requires resilience and exceptional performance, which is why The Internet Relies on **Catchpoint**.
