Catchpoint IPM Platform

Everything in Pro Plan +

Schedule tests with varied parameters!

Set custom performance budgets and receive proactive alerts for breached thresholds

Collaborate with Devs, Product, SREs, QA teams in a single platform to fix perf issues

Advanced web perf monitoring with AI-powered smartboards, dashboards, and built-in visualizations:

- Track, trend, and compare Core Web Vitals, Lighthouse scores, and JavaScript metrics
- Monitor DNS, BGP, CDNs, and other possible bottlenecks from real devices and browsers around the globe

Leverage RUM (including INP) to paint a precise picture of your users and view both lab and field data in one platform

Shift-wide web performance to ensure success across all stages of the DevOps lifecycle

- Integrate effortlessly with existing CI/CD tools like Jenkins

Single Sign-On (SSO), enhanced security features, and SLO Monitoring

Monitor from the most important markets to your business with the largest active monitoring network in the world

Complete IPM visibility across your entire internet stack to resolve issues before it impacts your business
